Leaders in the Data Quality MQ

- Gartner acknowledges Informatica's leadership in innovation, providing powerful **AI and ML, increasing user productivity and data accuracy.**
- **For 13 years**, Informatica has been a leading solution to ensure that all your customers' business initiatives will be powered with trusted, governed data.

The Data Quality and Governance Process

Discover

- Data discovery
- Data profiling
- Data inventories
- Capabilities assessment

Measure and monitor

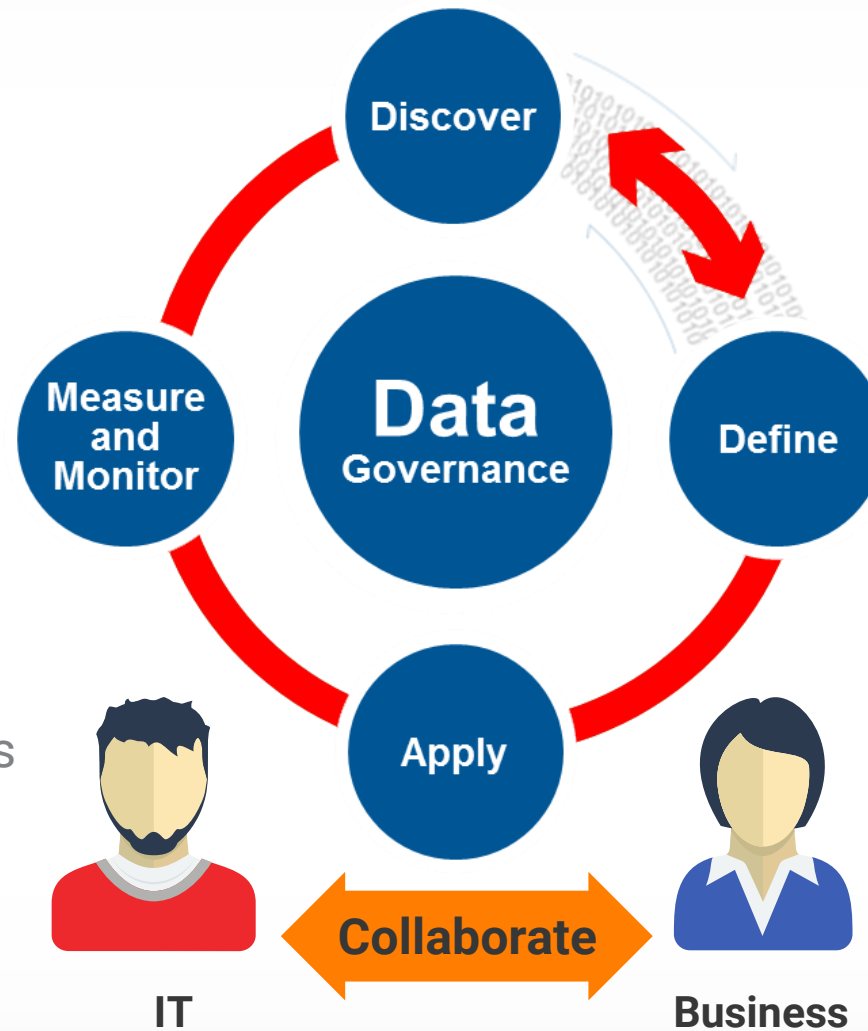

- Operational dashboards
- Scorecards
- Reactive operational DQ audits
- Dashboard monitoring/audits
- Exception Console

Define

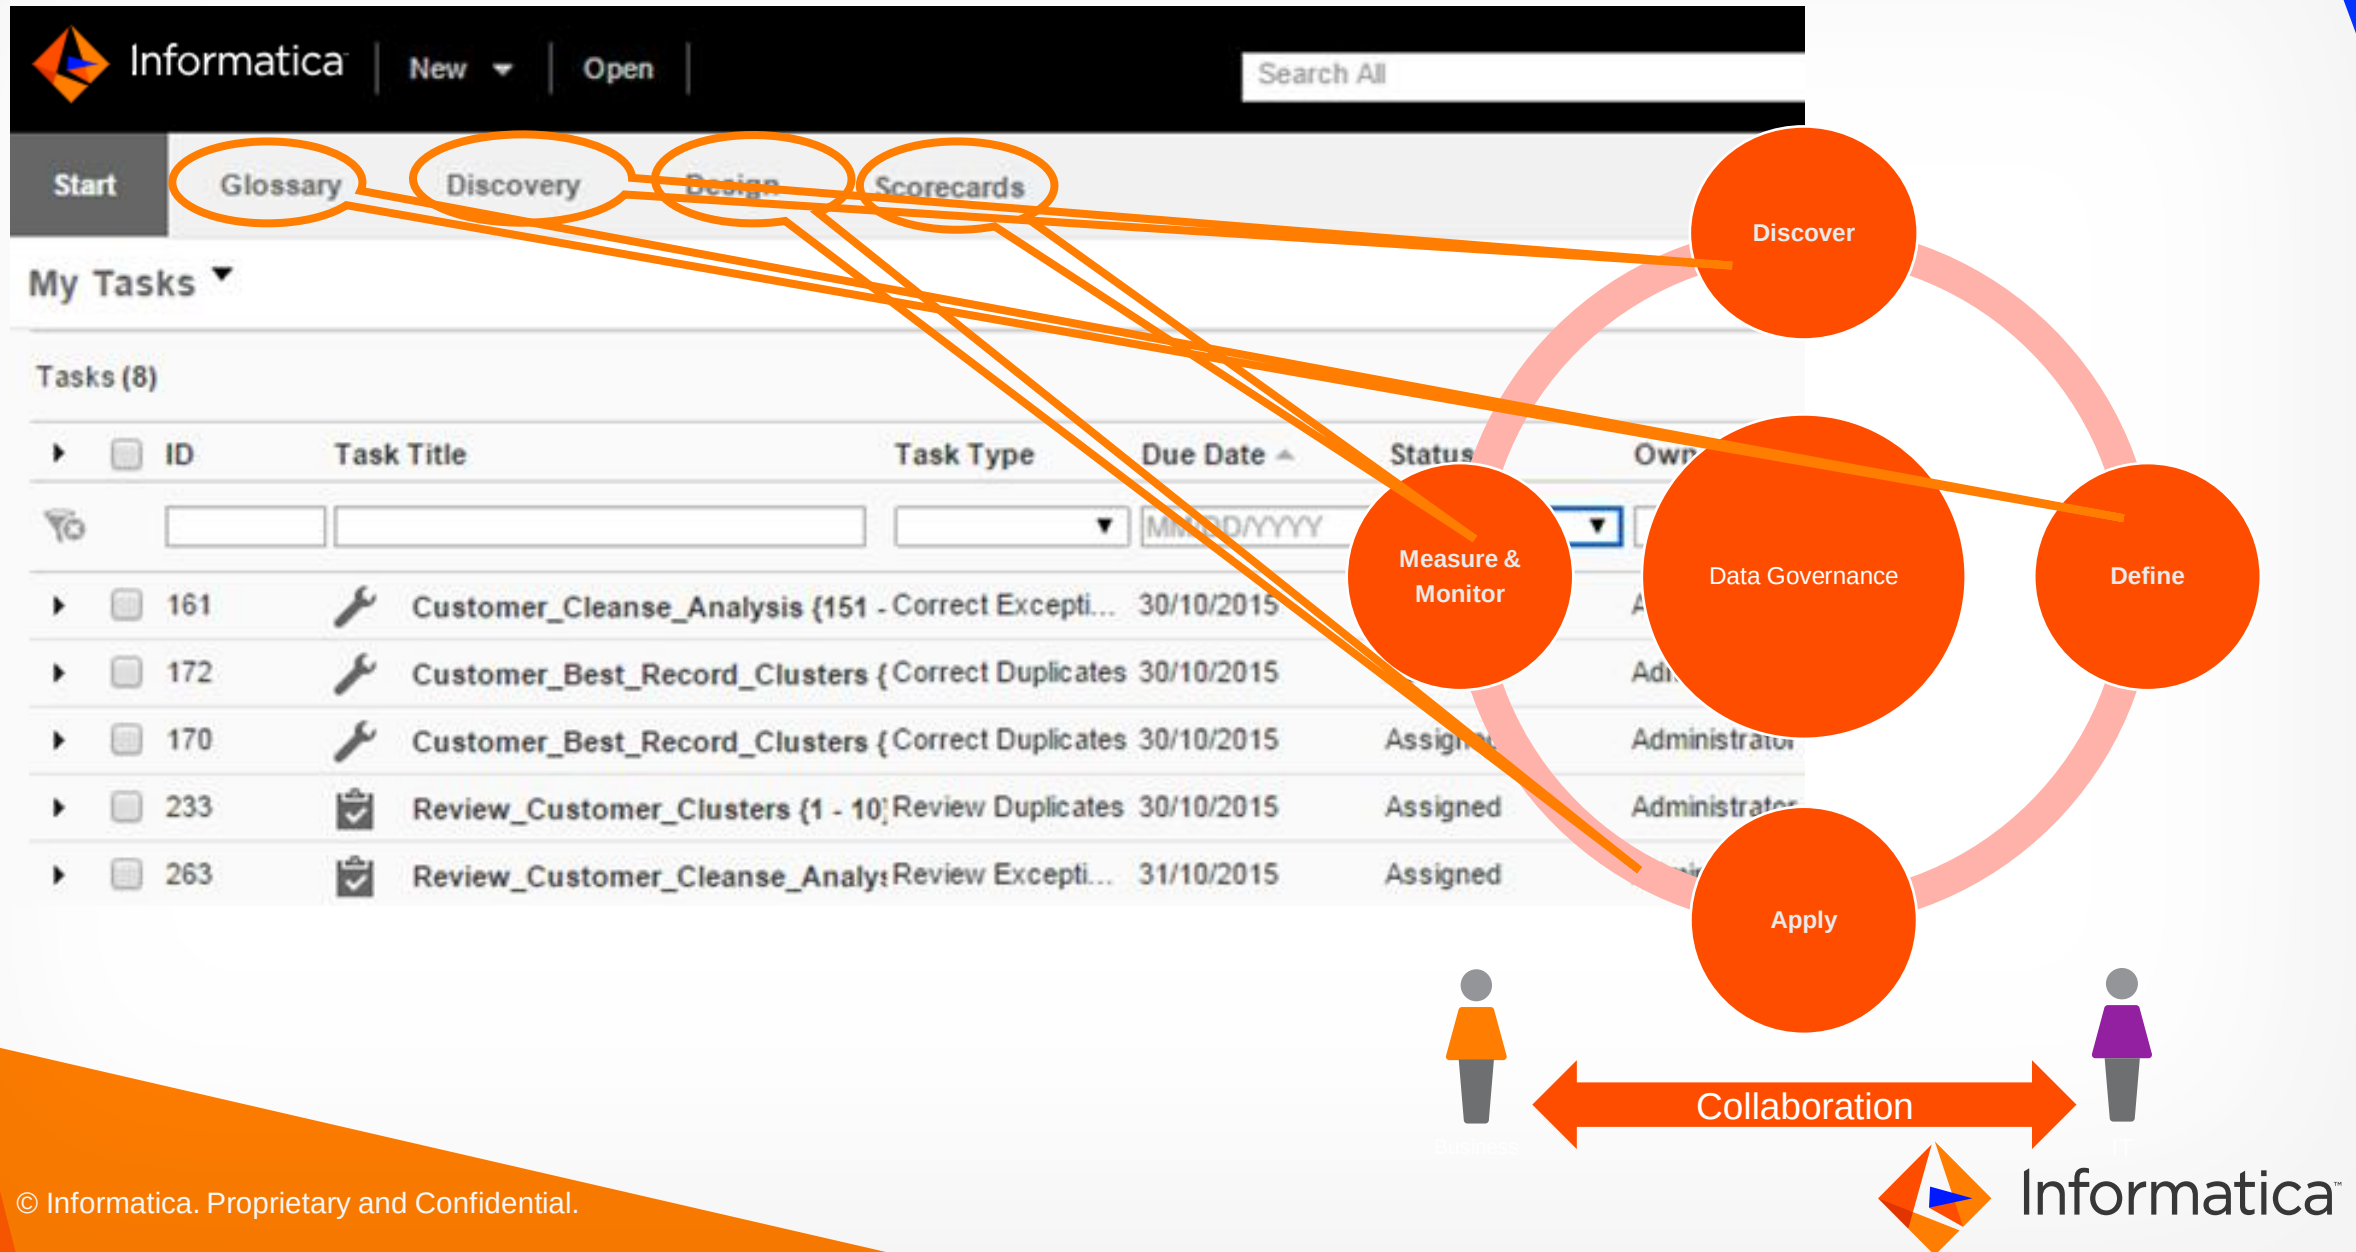

- Data governance policies
- Other dependent policies
- Data classifications
- Data relationships
- Reference data
- Business rules
- Key Performance Indicators

Apply

- Automated rules
- Manual rules
- End to end workflows
- Business/IT collaboration

Holistic Data Stewardship Console

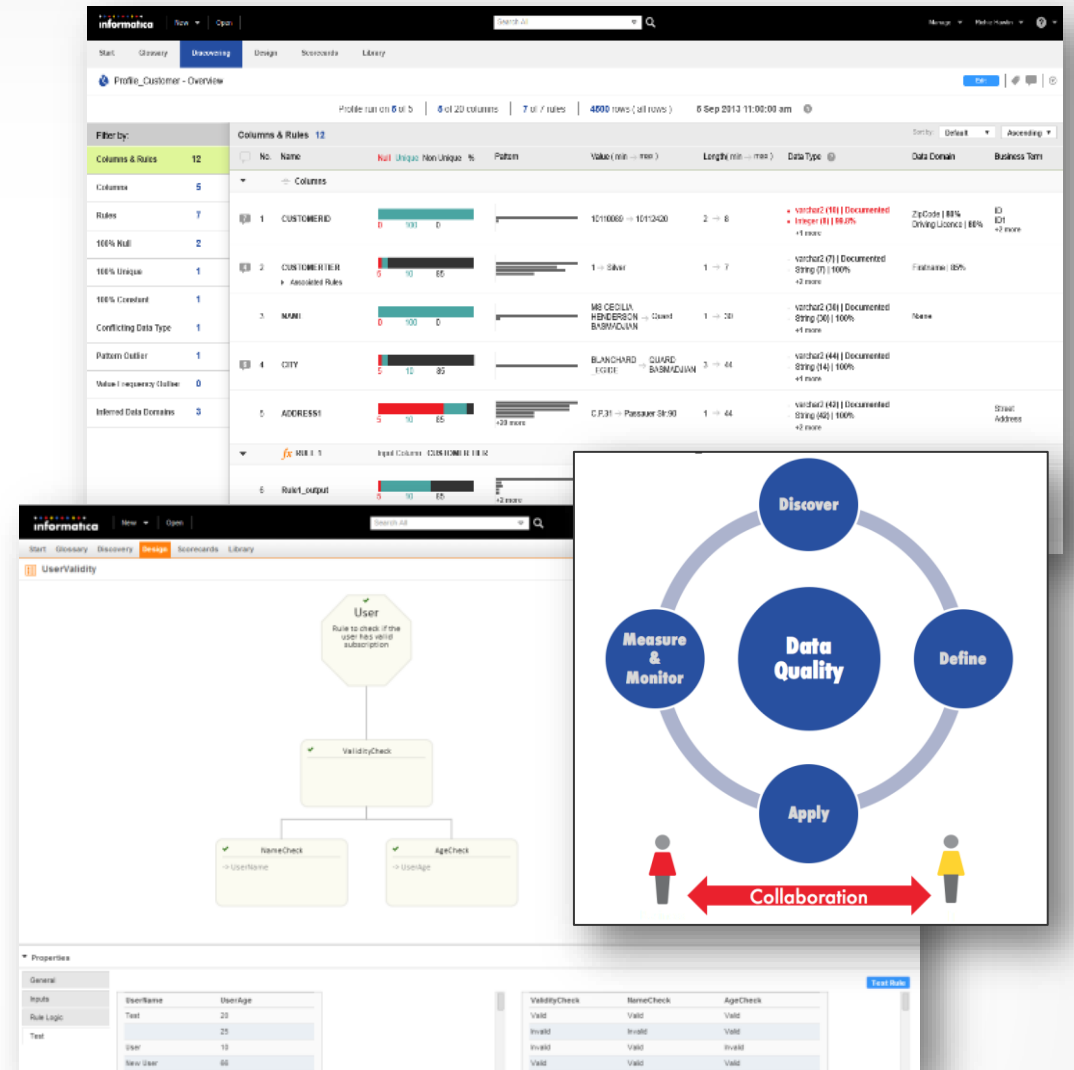

Discover and Profile

Data Quality Management

Quality Measurement and Improvement

- Role-supporting tools and interfaces
- Implementation of complex as well as simple quality rules with off-the-shelf libraries of re-usable rules
 - Data Validation: Phone, Email, Address
 - Enrichment: Geocoding, Cameo
- Deployment of rules across disparate systems and technologies
- Management of Exceptions with manual remediation, including approval workflows (2, 4, 6 eyes)
- Propagation of Quality Measurement to Data Governance Dashboards, Operational and BI systems

Data Domain Discovery

Infer functional meaning in data

Domain Discovery
applied against
enterprise data

The screenshot displays the Informatica Data Domain Discovery interface. The left pane shows the 'Data Domain Glossary' with a tree view of domains like 'Account_Bank', 'Address', 'Contact', and 'General'. The right pane shows the 'Profile_Customer - Overview' view, which includes a table of columns and rules. A callout box points to the 'Data Domain' column in the table.

No.	Name	Null	Unique	Non Unique	%	Pattern	Value (min → max)	Length (min → max)	Data Type	Data Domain	Business Term
1	CUSTOMERID	0	100	0			10110089 → 10112420	2 → 8	varchar2 (10) Documented Integer (8) 99.8% +1 more	ZipCode 80% Driving Licence 80%	ID ID1 +2 more
2	CUSTOMERTIER Associated Rules	5	10	85			1 → Silver	1 → 7	varchar2 (7) Documented String (7) 100% +2 more	Firstname 85%	
3	NAME	0	100	0			MS CECILIA HENDERSON → Quard BASMADJIAN	1 → 30	varchar2 (30) Documented String (30) 100% +1 more	Name	
4	CITY	5	10	85			BLANCHARD EGIDE → QUARD BASMADJIAN	3 → 44	varchar2 (44) Documented String (14) 100% +1 more		
5	ADDRESS1	5	10	85			C.P.31 → Passauer Str.90	1 → 44	varchar2 (42) Documented String (42) 100% +2 more		Street Address
fx RULE 1 Input Column : CUSTOMER TIER											
6	Rule1_output	5	10	85			AB → WV	2 → 14	varchar2 (21) Documented Fixed Length String (2) 98.79% +1 more		
fx RULE 2 Input Column : CUSTOMER NAME											

Scalable to look for/discover ANY Domain type

Reduce compliance risks (e.g. sensitive data) - Increase awareness of data issues and anomalies

Rules definition and execution

The background of the slide features a photograph of a modern architectural interior, characterized by a complex, branching, tree-like structure that resembles a large, open hall or a futuristic transit station. The image is overlaid with a semi-transparent orange gradient. In the bottom right corner, there are large, overlapping geometric shapes in white and a darker shade of orange. A small blue triangle is visible in the bottom left corner.

Business Rule Builder

Empower the Business to lead DQ initiatives

Reduce project cycles

Enable IT to focus on strategic projects

Through

Business friendly rule creation experience

The screenshot displays the Informatica Business Rule Builder interface. The top navigation bar includes 'Start', 'Glossary', 'Discovery', 'Design' (active), 'Validation', 'Scorecards', and 'Library'. A search bar and user profile 'Anna Joyce' are also present. The main workspace shows a rule diagram for 'Customer_Information_Validation'. The diagram starts with a description: 'Checks if the customer information in data base in complete, accurate and conforms to bank standards'. This leads to a central node 'Customer_Information_Validation...' which branches into four sub-rules: 'Customer_email_check' (EmailID), 'Customer_phone_check' (Phone), 'Currency_Check' (Revenue), and 'Address_Check' (AddressLine1, AddressLine2). Below the diagram, the 'Properties: Customer_Information_Validation' panel is open, showing the 'Rule Logic' tab. The rule logic is defined as follows:

		Input	Operator	Condition	Action
if		Currency_Check	is	'Valid'	
and		Customer_email_check	is	'Valid'	
and		Customer_phone_ch...	is	'Valid'	
and		Address_Check	contains	Value('Verified',start)	then 'Valid'

Automatically create executable rules from logical definitions

IDQ Accelerators (country, financial...)

- Pre-built rules, reference tables and content sets covering:
 - Person name parsing, standardisation, gender identification
 - Company name standardisation
 - Address Cleansing (Last Line validation, based on reference tables)
 - Address Validation (using AddressDoctor)
 - Personal and Company government ID validation
 - Phone Number processing (Area codes, formats)
 - Pre-built matching routines (using classic and IMO approaches)
 - Probabilistic Parsing to identify Name, Company, Address, Title and Noise data

Parsing, standardization, address validation

Provide trustworthy data across all domains
